All statutory compliances like PF, ESIC, Bonuses, Leave, Minimum Wages is completely managed as per government norms.

- **Occupational Health Hazard Assessment**

The aim of occupational Health Hazard Assessments is to systematically and proactively identify health hazards in the workplace, assess their potential risks to health and determine appropriate control measures to protect the health and well being of workers. Workforce protection should be seen in the context of a vision of 'Zero Harm'-ensuring that a workplace culture is embraced that recognizes occupational illnesses are preventable, that ensures repeat occurrences of occupational disease do not occur, and promotes the setting and implementing a consistent set of standards to prevent occupational illness.

Our Occupational health & hygiene experts and EHS professionals will carry out detailed survey of your workplace based on tasks performed and identify the risk involved in such activities.

- **Industrial Hygiene Survey**

Industrial hygiene is the science of anticipating, recognizing, evaluating, and controlling workplace conditions that may cause workers' injury or illness. Industrial hygienists use environmental monitoring and analytical methods to detect the extent of worker exposure and employ engineering, work practice controls, and other methods to control potential health hazards. A work site analysis is an essential first step that helps an industrial hygienist determine what jobs and work stations are the sources of potential problems.

During the work site analysis, the industrial hygienist measures and identifies exposures, problem tasks, and risks. Our industrial hygienist will inspect, research, or analyze how the particular chemicals or physical hazards at that work site affect worker health. If a situation hazardous to health is discovered, we will recommend the appropriate corrective actions.

- **Health Check ups**

Pre-employment Health Check up:

To assess mental and physical status of the employee for a specific job, To record baseline health data, To recruit fit employees at work, To reduce economic burden on the organization due to unfit employee, to comply with legal requirements.
